

Feeding Your Guppies In An Orderly Fashion

Frank Schulterbrandt 11/22/2015

When feeding your guppies we all have a favorite food that we like to feed. The problem here is that most of us tend to feed that preferred food more than the rest of the guppy foods that you have in your so called food rotation. This is a simplified way of feeding your guppies the same way and in the same rotation, every time. What is needed for this is a two foot length of PVC 4 inch tubing and a 5 inch by 5 inch plywood and two 3 inch "L" metal brackets. Fasten the tube to the wall, I will leave this part up to you. As you withdraw one jar of food to feed your guppies from the bottom of the PVC tube, another jar falls onto the plywood from the PVC tube. When you are done feeding your guppies you place that jar that you just fed your guppies with at the top of the PVC tube. By using this method you keep the same feeding program rotation of feeding food to your guppies intact.
